

**Esercizio 1.** Allenamento con le formule di riduzione

$$\iint_{\{0 \leq x \leq 1, 0 \leq y \leq 1\}} xy \, dx dy \quad \iint_{\{1 \leq y \leq 3, 0 \leq x \leq 1-y/3\}} xy \, dx dy \quad \iint_{\{0 \leq x \leq 1, 0 \leq y \leq 1\}} \frac{x}{1+y} \, dx dy$$

$$\iint_{\{0 \leq x \leq 1, 0 \leq y \leq 1\}} e^{x-y} \, dx dy \quad \iint_{\{1 \leq y \leq 3, 0 \leq x \leq 1-y/3\}} e^{x-y} \, dx dy \quad \iint_{\{1 \leq y \leq 3, 0 \leq x \leq 1-y/3\}} \frac{x}{1+y} \, dx dy$$

**Esercizio 2.** Sull'uso delle coordinate polari

$$\iint_{\{x \leq 0 \leq y, x^2 + y^2 \leq 1\}} xy \, dx dy \quad \iint_{\{x \leq 0 \leq y, x^2 + y^2 \leq 1\}} (1+x) \, dx dy \quad \iint_{\{1 \leq x^2 + y^2 \leq 3\}} xy \, dx dy$$

$$\iint_{\{1 \leq x^2 + y^2 \leq 3\}} x^2 + 4y^2 \, dx dy \quad \iint_{\{x^2 + y^2 \leq 1, (x-1)^2 + y^2 \leq 1\}} 1 \, dx dy \quad \iint_{\{x^2 + y^2 \leq 1, (x-1)^2 + y^2 \leq 1\}} xy \, dx dy$$

**Esercizio 3.** Alcuni facili cambi di variabili (scrivere  $x$  e  $y$  in funzione delle altre variabili e calcolare il modulo del determinante della matrice jacobiana senza fretta...)

$$\iint_{\{1 \leq x+2y \leq 2, 1 \leq 2x-y \leq 2\}} x^2 \, dx dy \quad \iint_{\{1 \leq x+2y \leq 2, 1 \leq 2x-y \leq 2\}} (1+x) \, dx dy \quad \iint_{\{0 \leq x \leq 2, -2 \leq y-x \leq 0\}} x^2 \, dx dy$$

$$\iint_{\{0 \leq x \leq 2, -2 \leq y-x \leq 0\}} (1+x) \, dx dy \quad \iint_{\{x \leq y \leq 2x, 1/x \leq y \leq 2/x\}} x^2 \, dx dy \quad \iint_{\{x \leq y \leq 2x, 1/x \leq y \leq 2/x\}} (1+x) \, dx dy$$
